Venue: 202/402

Faculty: Dr.P.Supraja

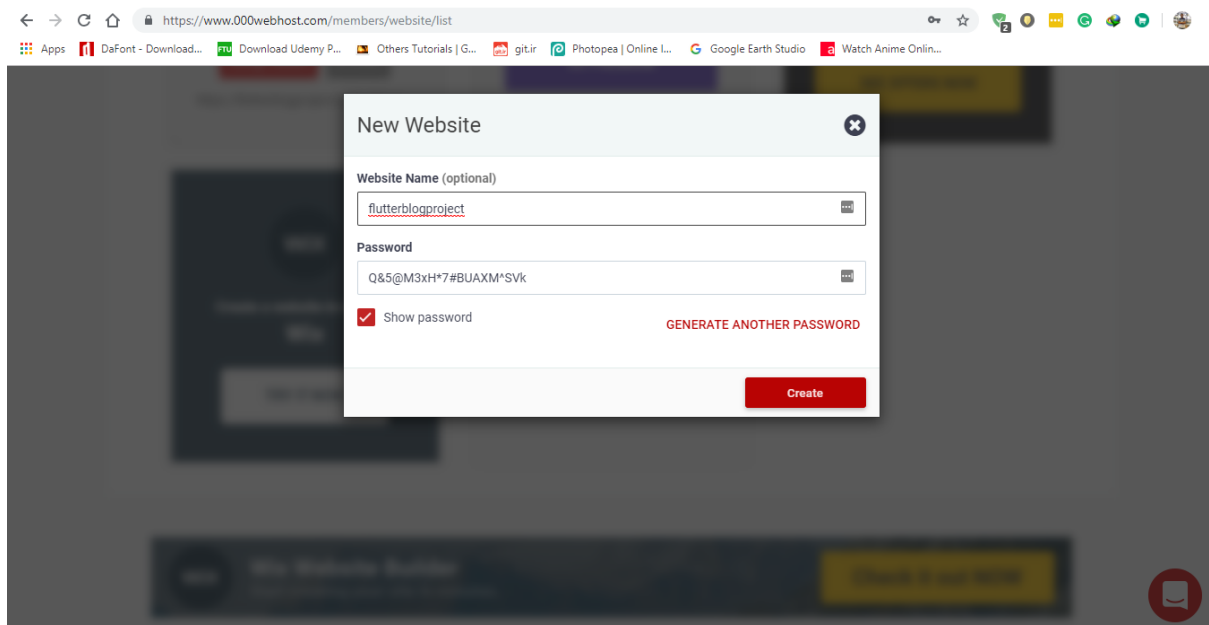

Steps for Web Hosting:

Step1: Find the free Web hosting Service and Signup your details

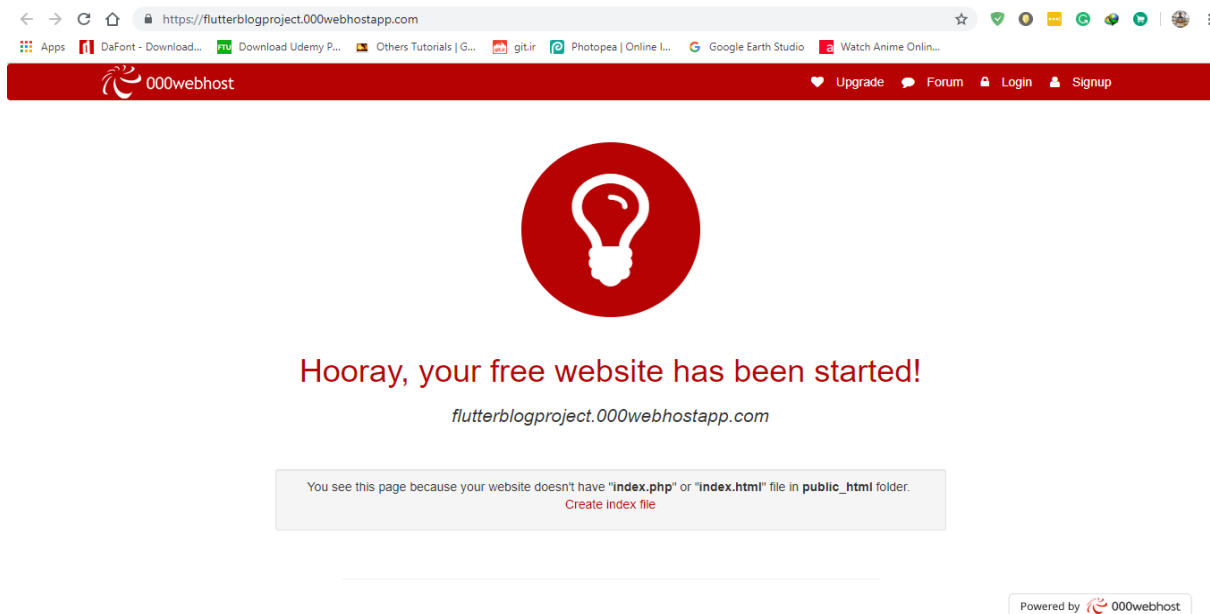

The screenshot shows the 000webhost Sign Up page. The browser's address bar displays the URL <https://in.000webhost.com/free-website-sign-up>. The page features the 000webhost logo at the top left, which includes a red circular icon and the text "000webhost POWERED BY HOSTINGER". The main heading is "Sign Up" in a large, dark font. Below the heading, there is a link that says "Already have an account? Log In". The sign-up form consists of three input fields: "Email", "Password", and "Repeat Password". To the right of these fields are two buttons: "Sign Up with Facebook" and "Sign Up with Google". At the bottom of the form is a red "Sign Up" button. The browser's taskbar at the bottom shows various application icons and the system clock indicating 23:08 on 09-04-2019.

Step2: After the Successful Login, go to my Admin tab and create a new website by clicking on the plus icon. and enter the website name and password to create the site domain.

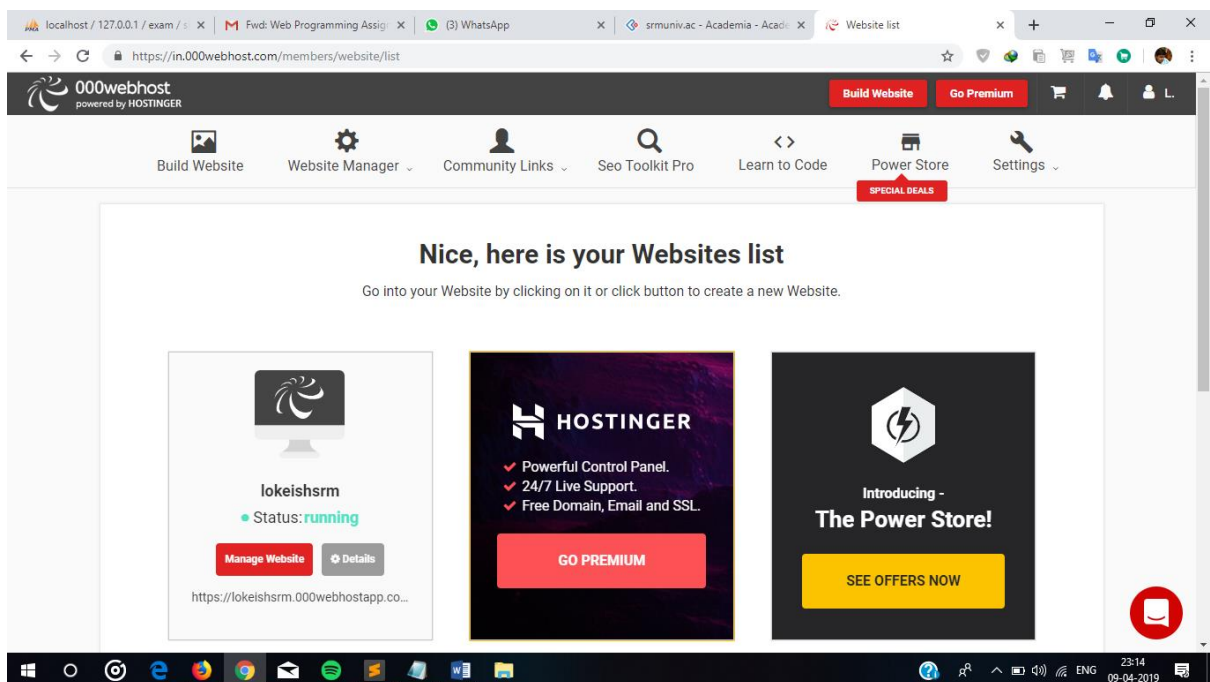

The screenshot shows the "New Website" creation dialog box on the 000webhost website. The dialog box has a title bar with a close button. It contains two input fields: "Website Name (optional)" with the text "flutterblogproject" and "Password" with the text "Q&5@M3xH*7#BUAXM*SVk". Below the password field is a checkbox labeled "Show password" which is checked. To the right of the password field is a link that says "GENERATE ANOTHER PASSWORD". At the bottom right of the dialog box is a red "Create" button. The background of the page is blurred, showing the website's interface.

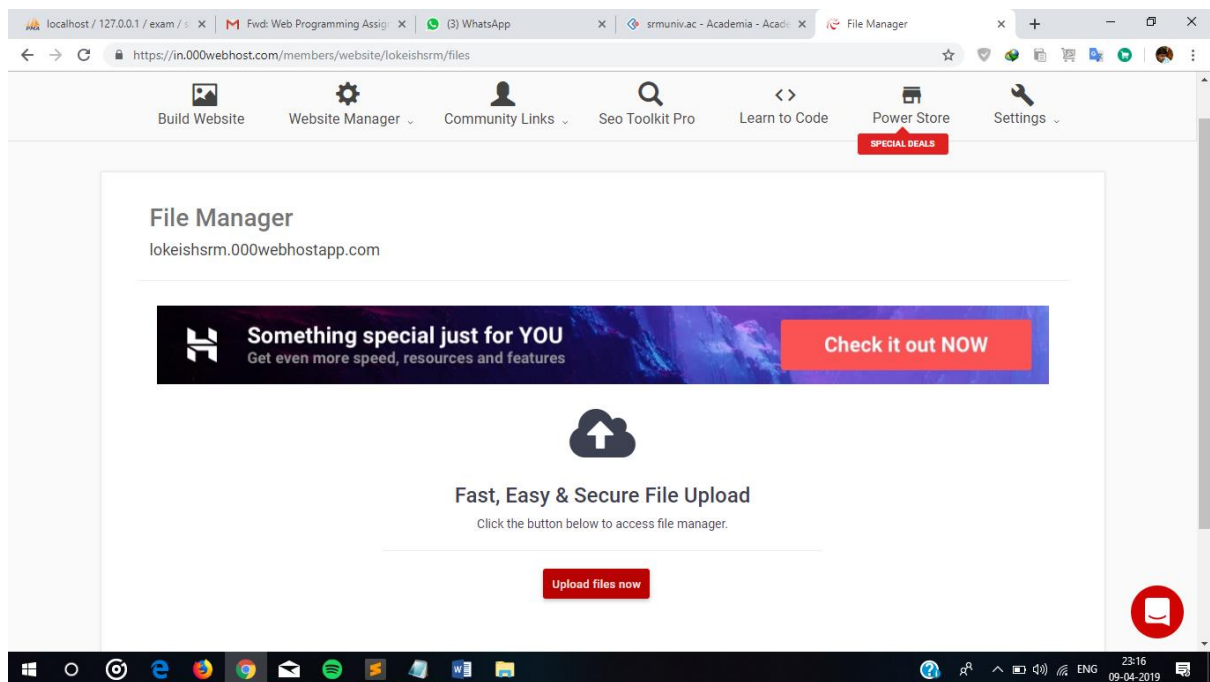

Step3: Give the proper unique website name otherwise it throws error and give the strong password and push the submit button and you will be redirected to the successful page i.e successful creation of your domain for free.

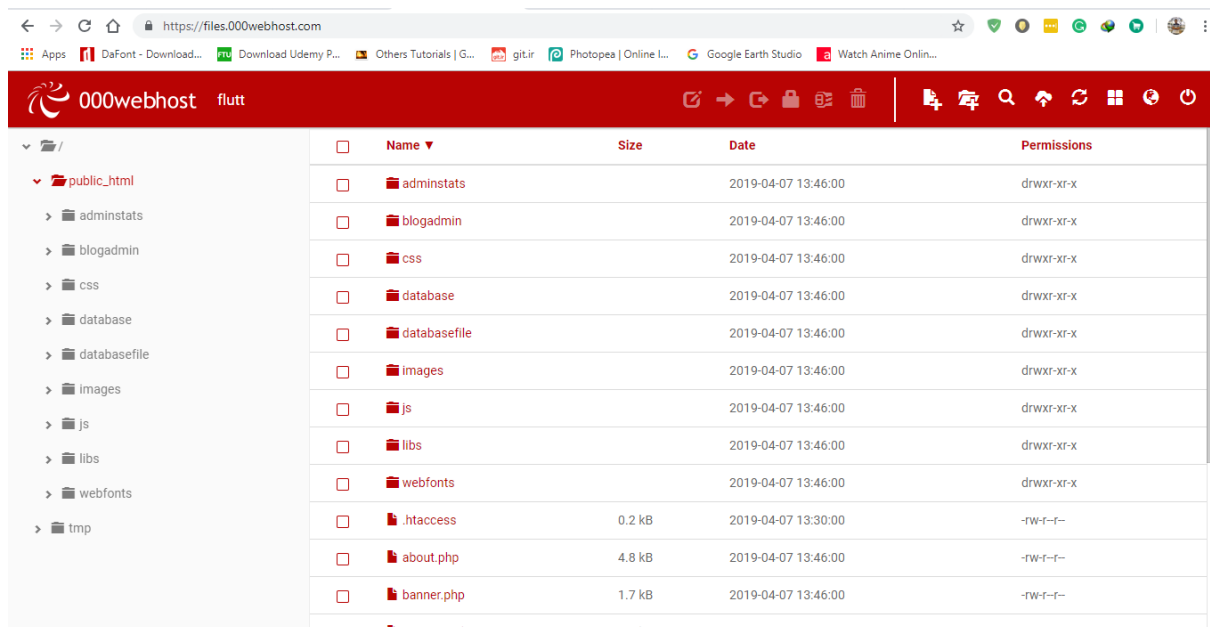

Step4: In the home page you will be having different type of controls over your website and the initial step is to Build a website.

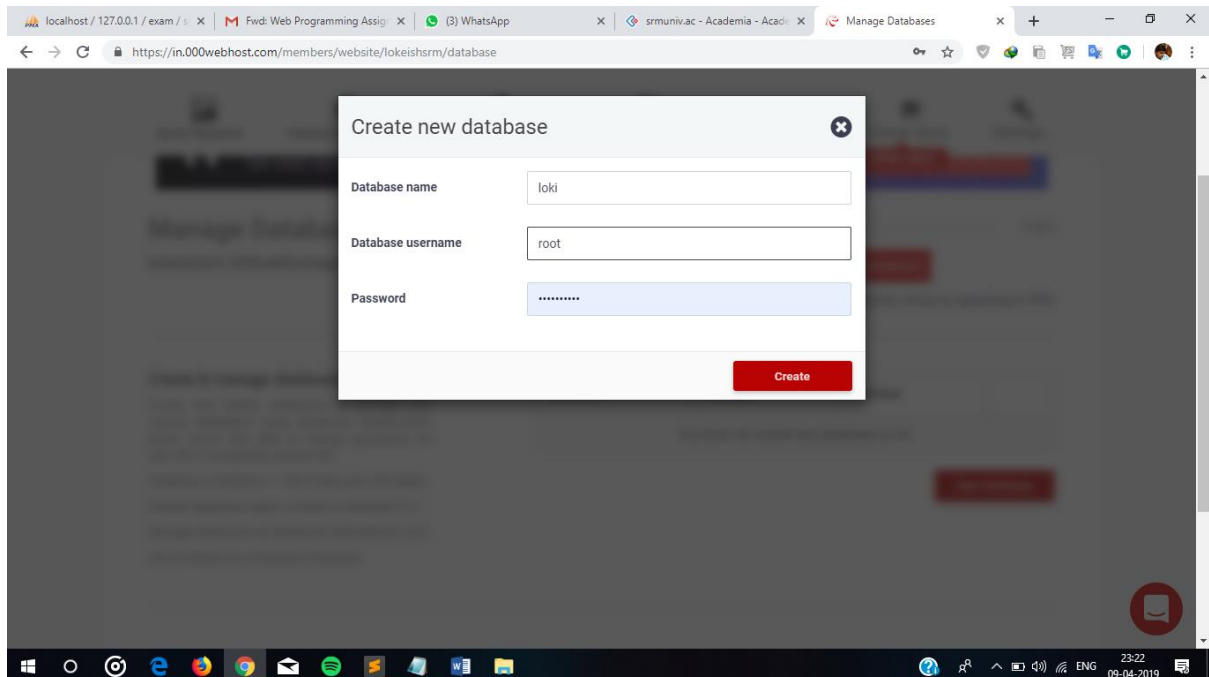

Step5: Choose the File Manger in the Drop down of web site manager and select File manager and you will Redirected to upload files page.

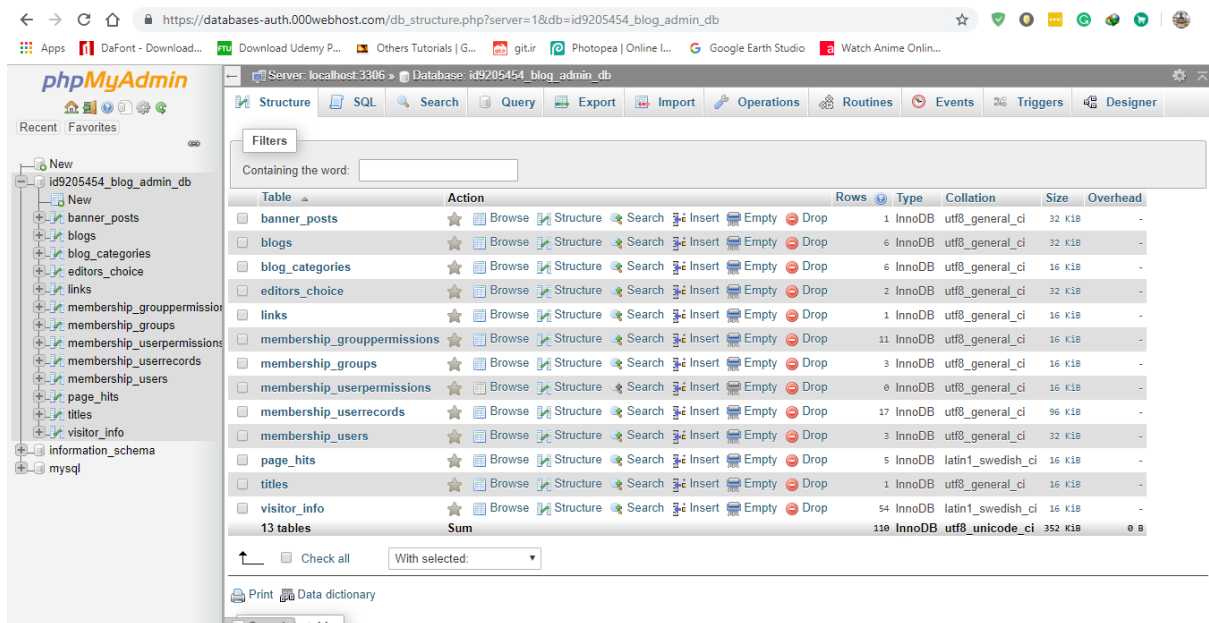

Step5: After the successful upload of files rename the landing page.php to index page.php.

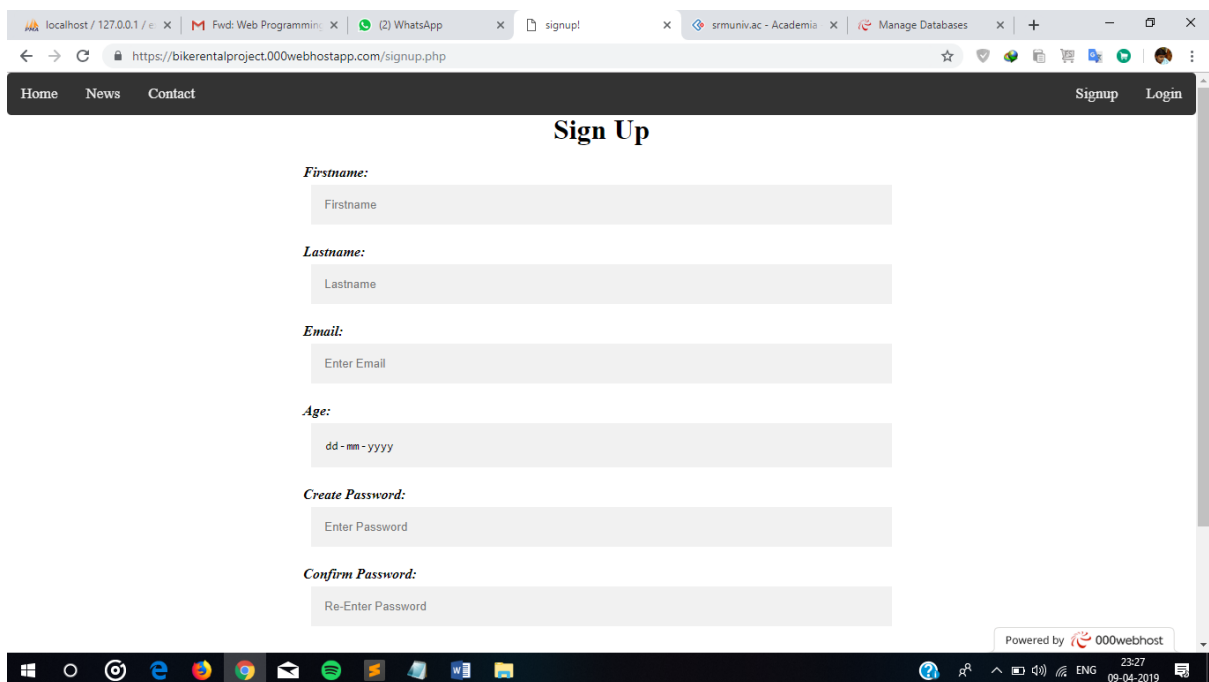

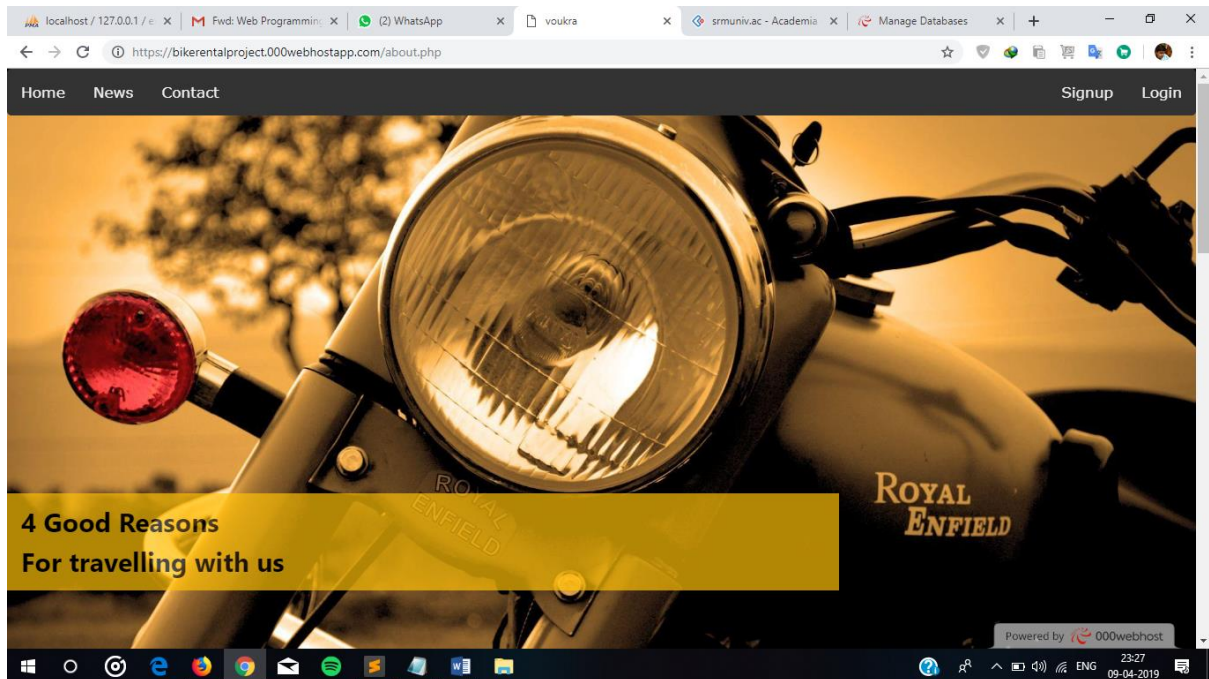

Step6: Now the main part comes here i.e we should create the database for our website.

The phpmyadmin database file can be imported from your localfiles.

Step7: After the successful creation of your database now you're ready to open your own website globally.
